

Step 1 – Insert a New Row

Detailed Explanation

Select the row or cell where you want to insert a new row. Press Ctrl + Shift + + (Plus). Excel will insert a new row above the selected row.

Key Point

Shortcut: Ctrl + Shift + +

Step 2 – Start the SUBTOTAL Formula

Detailed Explanation

Click the cell where you want the result and type =SUBTOTAL. Excel will show the available function numbers. Each number tells SUBTOTAL which calculation to perform.

Key Point

Formula: =SUBTOTAL

Step 3 – Use 9 for SUM

Detailed Explanation

For adding values, use function number 9. Type 9, enter a comma, and select the range from C3 to the last required row. You can select downwards quickly with Ctrl + Shift + Down Arrow.

Key Point

Formula: =SUBTOTAL(9,C3:C7)

Step 4 – Check the Total

Detailed Explanation

Press Enter after selecting the range. In this example, the calculated total is 29. Function 9 performs a SUM calculation.

Key Point

Result: 29

Step 5 – Hide a Row

Detailed Explanation

Press Ctrl + 9 to hide the selected row. With SUBTOTAL 9, the manually hidden row is still included, so the total does not change.

Key Point

Shortcut: Ctrl + 9

Step 6 – Unhide the Row

Detailed Explanation

Press Ctrl + Shift + 9 to unhide the hidden row. The SUBTOTAL 9 result remains unchanged because function 9 includes manually hidden rows.

Key Point

Shortcut: Ctrl + Shift + 9

Step 7 – Use 109

Detailed Explanation

Now use function number 109 instead of 9. Function 109 calculates the SUM while ignoring manually hidden rows.

Key Point

Formula: =SUBTOTAL(109,C3:C7)

Step 8 – Understand 9 vs 109

Detailed Explanation

The key difference is that 9 includes manually hidden rows, while 109 ignores manually hidden rows. This is useful when you want your total to respond to rows that are manually hidden.

Key Point

9 = includes hidden rows | 109 = ignores hidden rows
